

Bioeconomics

This recent subject concerns the description of survival and reproduction mechanisms in each living beings. *Bioeconomics* is based on adaptation principles, that are already studied in depth by ecology, ethology, socio-biology, anthropology and economics. In *bioeconomics* you find a bidirectional exchange between evolutionary biology and economics, that allows the explanation of different aspects in human evolution (anthropology). For these reasons, *bioeconomics* is a pure frontier subject, both for its innovative character and for its multidisciplinary vocation.

Bob Rowthorn

- Emeritus Professorin Economics, University of Cambridge (UK)
- Fellow, King's College, Cambridge (UK)
- Director of Studies in Economics, King College, Cambridge (UK)

LECTURES

Natural Selection and Human Behaviour:
Foundations of Altruism and Cooperation

13 May 2009
h. 18 - Auditorium

"Am I My Brother's Keeper?" Altruism
Between Genetically Related Kin

15 May 2009
h. 18 - Aula Meeting

Altruism and Cooperation Amongst
Unrelated Individuals

20 May 2009
h. 18 - Aula Refugio

Altruism and Cooperation Amongst
Unrelated Individuals (Continued)

21 May 2009
h. 18 - Aula Refugio

Property Rights and the Neolithic
Transition

26 May 2009
h. 18 - Aula Meeting

The Optimal Control of Epidemics

28 May 2009
h. 18 - Aula Meeting

Chair in **Bioeconomics**
Prof. Bob Rowthorn
