

Cognitive Sciences

The Chair in “Cognitive Sciences” is a landmark for all the research areas involved. Cognitive science is the study of mind. It embraces multiple research disciplines, including psychology, artificial intelligence, philosophy, neuroscience, linguistics, anthropology, sociology, economics and biology. It relies on varying scientific methodology (e.g. behavioral experimentation, computational simulations, neuro-imaging, statistical analyses), and spans many levels of analysis of the mind. For this Chair exceptional candidates with strong qualification and experience will be considered. The successful candidate will be expected to give a contribution to a deeper understanding of the connections among the different disciplines that fall under the realm of “Cognitive Sciences”.

George Loewenstein

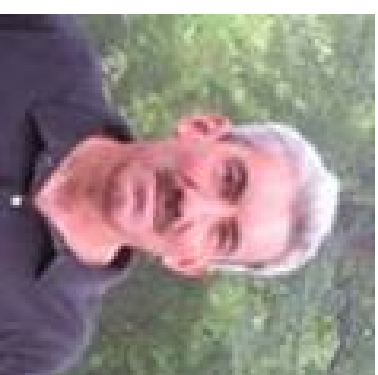

Herbert Simon Professor of Economics and Psychology,

Department of Social and Decision Sciences,
Carnegie Mellon University, Pittsburgh (USA)
